Your mapping projects, on the ground.

GLIDE Geo provides drivers, vehicles and daily coordination for road-imagery collection campaigns.

Our collection vehicles and roof mounts in the Paris region.

Experience built on the road.

We run collection operations in France using KartaCam 2 systems. From preparing cameras and briefing drivers to handling technical issues and data uploads, our team manages the work each day.

Based in the Paris region, we work with you to plan the people and vehicles required for projects in France and across Europe.

From preparation to the vehicles' return.

Before departure

Vehicle and camera preparation, equipment checks and driver briefings on the collection areas and operating instructions.

During collection

Driver coordination, daily monitoring and incident handling. We keep your team informed of issues encountered in the field.

After collection

Equipment recovery and charging, monitoring of data uploads and preparation for the next working day.

Your project, your technical requirements.

We work with the capture systems and instructions selected for your campaign. Mounting, data formats and transfers are checked with your team before operations begin.

Direct involvement in field operations.

Kyllian Alexandre coordinates each assignment and is personally involved in its delivery. You deal directly with the person overseeing the operations.

Let's discuss your next collection.

Tell us the locations, dates and number of vehicles you have in mind. We will prepare an operational proposal and a quotation.
